

## **PERSONAL INFORMATION**

**NAME: KONSTANTINOS LAZARIDIS**  
**e-mail: klazaridis@pasteur.gr**  
**TEL.: +30 2106478807**

## **CURRENT POSITION(S)**

- 10.2022 – present**      **Researcher B'**  
Laboratory of Immunology, Hellenic Pasteur Institute, Greece

## **PREVIOUS POSITION(S)**

- |                          |   |
|--------------------------|---|
| <b>07.2018 – 10.2022</b> | <b>Researcher C'</b><br>Laboratory of Immunology, Hellenic Pasteur Institute, Greece                                  |
| <b>10.2016 - 06.2018</b> | <b>Senior Post doc</b><br><br>Laboratory of Molecular Neurobiology and Immunology, Hellenic Pasteur Institute, Greece |
| <b>02.2006 - 09.2016</b> | <b>Post doc</b><br><br>Laboratory of Molecular Neurobiology and Immunology, Hellenic Pasteur Institute, Greece        |

EDUCATION

- |                          |  |
|--------------------------|--|
| <b>09.2000 – 07.2014</b> | PhD: School of Biological Sciences, University of East Anglia, UK.<br>Thesis title: “Investigation of the Smad-dependency for protease and inhibitor gene expression in response to TGF- $\beta$ 1”. |
| <b>09.1997 - 05.2000</b> | BSc: School of Biological Sciences, University of Surrey, UK.<br>Dissertation title: “Translation initiation mechanisms in insect picornaviruses”.   |

## **PERSONAL STATEMENT**

Dr Lazaridis has worked in the field of autoimmunity and especially myasthenia gravis (MG) over the past 17 years. During this time, he has participated, among others, in three European (FP7) projects (Euromyasthenia, Fight-MG and NeuroCypress), and several other National and International programs, where he studied pathogenic mechanisms in MG, heterologous expression of acetylcholine receptor domains, the development of animal models for MG, and their use in preclinical studies of novel therapies.

Dr Lazaridis contributed to the improvement of the antigenic properties of heterologously-expressed AChR domains, and he was responsible for the *in vivo* studies on immunoadsorption, which successfully proved its therapeutic potential. He has led the development and characterization of novel animal models for MG in rats, better suited for preclinical studies on novel antigen-specific therapeutics (based on human sequences). He has participated in the activities of an international consortium of researchers in the field of animal models of autoimmunity, aiming at the generation of specific guidelines for preclinical drug-testing studies.

His current research activity is focused mainly on the development of novel antigen-specific therapies for MG. These efforts have yielded considerable results in support of the efficacy of new therapeutic approaches based on restoring the immunological tolerance for autoantigens, and have generated long-term collaborations with pharmaceutical industry companies. Ongoing studies of the immunological mechanism of action are expected

to increase our understanding and facilitate progression towards clinical application, but also allow the development of next generation approaches.

During this time, he has been able to attract a number of research grants, including from pharmaceutical sector R&D actions, fully supporting these efforts and attracting new young researchers at the Institute. His future aspiration is to not only maintain the progress of current projects, but also to expand towards new technologies so as to promote feasible and effective personalized medicine for MG and related autoimmune diseases.

---

## **CONFERENCES/WORKSHOPS**

---

- 70<sup>th</sup> annual conference of the HSBMB: “Investigation of autoantigen derived polypeptides as immunotherapeutic agents for Myasthenia gravis”, December 2019, Athens, Greece
- MGTX international conference: “Antigen-specific immunoabsorption ameliorates rat EAMG”, January 2016, Oxford, UK.
- MGTX international conference: “Titin antibodies in seronegative MG – A new role for an old antigen”, January 2016, Oxford, UK.
- 66<sup>th</sup> annual conference of the HSBMB: “Characterization of a novel animal model for MG induced by human acetylcholine receptor domains”, December 2015, Athens, Greece.
- 8<sup>th</sup> international autoimmunity conference: “Antigen-specific immunoabsorption for myasthenia gravis: addressing safety aspects”, May 2012, Granada, Spain.
- 63<sup>rd</sup> annual conference of the HSBMB: “Antigen-specific therapeutic immunoabsorption for myasthenia gravis: up-scaling and safety aspects”, November 2012, Heraklio, Greece.
- School on the “Heterologous protein expression in insect cell systems”, 2011, Oxford Brookes University, Oxford, UK.
- School on “Human and microbial microarrays”, 2006, Hellenic Pasteur Institute, Athens, Greece

---

## **INVITED PRESENTATIONS & ROUNDTABLES**

---

- 14th International Conference on Myasthenia Gravis and Related Disorders: “Development of an antigen-specific immunotherapy for myasthenia gravis”, May 10–12, 2022, Miami, USA.
- Conference on Molecular Medicine: “Development of antigen-specific immunotherapies for autoimmune myasthenia gravis”, Institute of Molecular Medicine and Biomedical Research, June 2021, Athens, Greece.
- COST TD1402-radiomag workshop: “Use of functionalized nanoparticles for the targeted manipulation of the immune system”, November 2017, Athens, Greece.
- NIH meeting - Pre-clinical models of Myasthenia gravis: “mAb35 use in passive rat model”, and Roundtable on “The methodology of EAMG in the rat model, care and outcome measurements”, October 2014, Bethesda, USA.

---

## **ADMINISTRATIVE EXPERIENCE**

---

- Member of the Committee for Animal Wellbeing of the Hellenic Pasteur Institute.
- Member of the Protocols Approval Committee of the Hellenic Pasteur Institute, for protocols involving the use of experimental animals.
- Member of the 5-member Committee which authored the self-study reports for the quinquennial External Evaluation of the Hellenic Pasteur Institute for the years 2013-2017 and 2018-2021.

## PUBLICATIONS

---

Publications: 34

Total citations: 1765; H-index: 18 (Scopus)

Book chapters: 3

Complete list of publications can be found at:
